

Clamp Forklift Parts

Clamp Forklift Part - Drum Clamps are attachments which are usually made use of in the petroleum and chemical companies. They were particularly designed for the secure handling of typical 55-gallon drums. These attachments really improve productivity because they are capable of handling as much as 4 drums per load.

Drum Clamps are also used in the food processing trade and wherever product is stored in drums. The use of this attachment not just hugely increases operator productivity but enables the individual driving to be able to grip the drums in a secure way for transport. While trying to handle drums making use of conventional lift truck forks, much instability occurs during cornering and braking. This common setback could actually be handled safely and efficiently by making use of the Drum Clamp attachment instead.
