The U.S. lift Truck division stationed in Cleveland has a professional team experienced in Sales, Purchasing, Advertising, Logistical and Technical Support.

In the beginning the domestic forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a domestic equipment expansion venture. Sales of these products were primarily targeted to state-run companies, large scale organizations, and the military. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training grew to become the new focus for improving quality and product development.

Home-based forklift trade for Daewoo started in 1967 and grew to an astonishing 90% market share in Korea. By the 1980's, Daewoo's superior technological advancements combined with sales success placed them in a position of substantial expansion of their lift truck operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This project radically expanded Daewoo's lift truck sales. Construction was finished in 1984 to facilitate a new plant which helped establish the business for the fabrication of high end added-value goods suited for export. In 1993, the corporation had a global sales network and started exporting designs they had developed through in-house expertise, as an independent product. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
