

Drum Clamps

Drum Clamps - Forklifts are really utilized to move, lift and store things placed on pallets. For companies which use drums, they usually require an attachment so as to handle moving, storing and lifting them. There are several various attachments that a business can utilize for all of your drum moving, storing and lifting needs. These attachments are specially meant so as to handle drum containers - hence there is no chance of damage to the product or drum container when they are stored, moved or lifted.

Drum Positioner And Grab

The drum positioner could be used to load and unload drums off of racks, drum stands and vehicles. These are existing in three and four tine models. This accessory is totally mechanical, hence enabling the person operating it to operate all from the comfort of the forklift seat. Able to move steel, large and extra large plastic drums, its capacity is 210 liters. This accessory is designed for drum pyramid stacking.

The drum grab could be mounted to the forks, with a designed objective of handling steel drums that have rolling hoops. Even if the original purpose for the design was to deal with steel drums with rolling hoops, the drum grab can help accommodate plastic drums as well. Drum capacity maximum is 220 liters for plastic barrels and 210 for steel drums with rolling hoops.

The Rotator

The drum rotator is another forklift attachment which mounts onto the blades themselves. Their purpose is to be able to pick up the drum and rotate it upside down. The drum is clasped into the drum rotator utilizing a clamp that fits around the middle of the drum. The rotation is done by either a continuous loop chain or a crank handle. The crank handle is intended for operations that happen below shoulder level. For operations that must occur over shoulder level, the continual circle chain will be utilized.

Drum tines are simple fork mounted accessory that could be used for stacking and unstacking 210-liter metal drums. Stacking involves nothing elaborate, only easy horizontal positioning of the drums. The carriage-mounted accessories lessen the load center of the drums.

Automatic Tongs

Drum tongs are accessible in semi-automatic and automatic versions. They are for use in the tight head or open topped steel drum kinds. The drum forceps can be attached in a couple of ways to the lift truck. One method is to attach them underneath a fork-mounted hook. Another way is to connect them to a fork-mounted jib or a carriage mounted jib. Either the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no requirement for the one operating it to ever leave the seat of the lift truck.

Rim Grip Handler

The Rip Grip Drum Handler is the ideal option for lift truck attachments, when there is a necessity to stockpile drums with limited area accessible. This attachment can be utilized on either 120L and 210L drums. The Rim Grip Handler works by using steel jaws in order to hold the rim of the drum. It picks the drum up and puts it down without needing any space between all the drums. The typical unit in the trade is a zinc-plated handler, although, this particular attachment comes accessible in stainless steel for the food and drink market.
